

BioAg - Digest-it Testimonials

"I am very pleased with the results in the last year and am looking forward to seeing results in the second year. I would highly recommend Digest-it to dairy farmers looking to improve the efficiency of their slurry lagoon. It only takes 4 hours to stir our lagoon now- it used to take 12 hours, so only 40 litres of diesel is used instead of 120 litres. I am also now able to store slurry for 12 months so it can be used more effectively at optimum times."

Mark Bowes - Townfield Farm

"Since using Digest-it to treat slurry the smell has been reduced, which was a particular concern of mine due to the close proximity of the farm to the town of Caernarfon. Crusting in the reception pit was also reduced and analysis of the treated slurry reported a 48% increase in Nitrogen content, which has substantially increased the fertiliser value".

Aled Jones - Hendy Holsteins

"Since using Digest-it®, surface crusting of our lagoon has now become a thing of the past, we also have a very easy and uniform slurry to apply."

Harold Hesketh - Kirkham i' the Fields
